

Table 2

Multivariable logistic regression model. The discriminative power of this model is indicated by a c-statistics of 0.83 (AUC). Given is the odds ratio (OR), the confidence interval, and the p-values.

Predictors	OR	95% CI		p-value
Donor age (per year)	1.108	1.005	1.221	0.040
LCN2 (AU)	1.269	0.851	1.890	0.242
HAVCR1 (AU)	1.443	0.943	2.208	0.091

AU: arbitrary units (log₂-ratio of the amount of mRNA as found in the sample with respect to the concentration of the respective mRNA given by the universal reference mRNA used in the qRT-PCR experiments).
