

Part 8: Adjusted hazard ratio plots with ESA prescription 'never turned off': ESA users remain in the user group even if treatment was stopped.

Fig. 15: Adjusted hazard ratio for ESA users (top) and non-users (bottom) at various hemoglobin levels vs. a reference level of 12.5 g/dl. Gray: original analysis (multiple imputation; N=1794, 286 events, follow-up until 31 Dec 2004), black: analysis with ESA users left in ESA user group even after the time point where treatment is stopped.
