Tables

Table 1. Cohort characteristics (Number of individuals in the analysis: 2346).

Cohort characteristics at first graft loss	Statistic	Missing
Age (years)	44 ± 14	0 (0%)
Sex (Female)	917 (39%)	7 (<1%)
Duration of dialysis before first transplantation (years)	1.5 (0.7, 3.1)	13 (<1%)
Year of first transplantation	1993 (1987, 2001)	0 (0%)
Duration of first transplant (years)	5 (1, 10)	0 (0%)
Panel reactive antibody (%)	8 (0, 40)	407 (17%)
Follow-up information		
Number of individuals with second transplantation	1869 (80%)	0 (0%)
Live donor organ second transplantation	115 (5%)	40 (2%)
Pre-emptive second transplantation*	79 (4%)	0 (0%)
Time first graft loss to waitlisting for second transplantation (years)	0.6 (0.2, 1.4)	0 (0%)
Time first graft loss to second transplantation (years)	2.5 (1.2, 4.2)	0 (0%)
Number of deaths during follow-up	966 (41%)	0 (0%)
Time first graft loss to death (years)	7.8 (3.8, 13.7)	0 (0%)
Follow-up time (years)	10.7 (5.3, 18.8)	0 (0%)

* Defined as dialysis vintage of less than one week before second transplantation

Data are reported as means ± SD, median (IQR), and absolute frequency (relative frequency in percent). Missing data is reported by absolute frequency (relative frequency in percent).
